Dear Marie,

There was a discussion of non-map Community of Interest input to the redistricting process. As you may recall, this COI description is what I submitted on January 25. As the basis for the redistricting plan I eventually entire district 3 shown below and follows major natural breaks. We walk regularly downtown, through the college and president streets, and the along arroyo through Robertson Park. Our neighborhood schools were J

### 3) Describe your Community (Specific boundaries. What makes it a community? Why should it be kept together?):

After seeing other maps and hearing the discussion thereof, I realized that the largest defect of the existing maps is that the north Livermore downtown neighborhood is split between experience when our children were growing up. I suspect that Junction Avenue school, for example, is not in the same district of most of its attendees. In addition, the railroad tracks just as much of a barrier to walking and biking as a freeway. I live in District 3 and have more friends in and a much stronger affiliation with the South Livermore downtown neighborhood school district with my neighborhood, and we gained friends through our children's friends. Also, the South Livermore neighborhood seems to have little in common with the various north Livermore downtown neighborhood in the same district. Finally, the two districts with the smallest populations are the ones more likely to increase in population due to develop

My number 1 choice is for Plan Ruby because it keeps the East side of Livermore together and does not split Maple in half for Zone #3. Our side of town which includes Livermore high school should include everything east of Livermore Avenue and south of first street. A more logical split- if there population numbers don't work - is to exclude south of College avenue and put it into Zone 4. That is already a more logical split because of school and sports boundaries. Of these final choices though, only Plan Ruby works and represents Zone 3 adequately.
